COMPANY OVERVIEW

Flo Power and Substation Services (FPSS) is a customer-centric provider of Substation Services that has historically focused on the underserved Municipal and Cooperative markets in the state of Florida. FPSS focuses on Transformer Services, Substation Construction and Electrical Testing and Commissioning. In August of 2025 Flo Power LLC was acquired by Cap Pro, parent company of Electrical Engineering Enterprises (EEE). This partnership empowers FPSS to deliver even greater value to customers with expanded resources, cutting-edge equipment, and a broader range of services.

COMBINED CAPABILITIES

Between our two separately operating business units FPSS & EEE the combined entities currently employ over 130 team members. The combined capabilities are:

- Transformer Maintenance and Service
- Transformer Installation, Replacements and Oversight
- Transformer Transportation and Refurbishment
- Apparatus Testing, Protections and Controls
- Apparatus Commissioning and Start Up
- Medium and High Voltage Industrial Electrical Services
- Overhead Powerline Install, Move, Add, & Change Support
- Underground Power Distribution, Location, Testing and Splicing

The geographical service area has grown from our home base in Central Florida to national coverage for our Customers with needs and infrastructure across the USA. In 2025, the Cap Pro companies have executed transformer and testing services in 16 states, including California, Oregon, and Arizona.

FLO POWER HISTORY

Flo Power was founded in 2017 by industry veteran Mike Dansby, whose career spans more than 40 years in transformer maintenance services. While most contractors chased the large companies, Mike focused on the underserved local municipals and Electrical Cooperatives. Drawing on decades of hands-on expertise and a deep understanding of the power industry, Mike set out to build a company that combined technical excellence with a true dedication to customer relationships.

SAFETY CULTURE

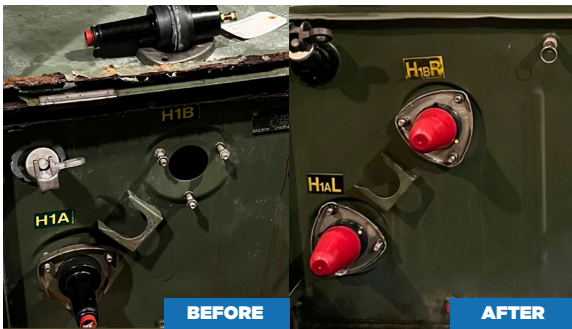

FPSS's number one priority is the safety of our staff and all people at the job site. Every job starts with a Job Hazard Analysis form. The job lead completes this form daily and briefs all workers on the hazards and work conditions specific to the duties of that day. JHA includes: job tasks, potential hazards, controls to mitigate hazards including PPE and permits required. In addition, our safety procedures include a daily inspection of all equipment to be used on job that day.

PARENT COMPANY INFORMATION

CapPro, Inc. is a holding company (Florida LLC) formed with the purpose of owning and operating complimentary electrical service companies. Critical infrastructure service companies offer sustainable business opportunities by providing mission critical electrical project and work order support. CapPro's growing work force of subject matter expertise is rapidly expanding the support and service to meet our Customer's demand. As systems become more complex and integrated with other technologies, CapPro is committed to continual improvements for all business functions to deliver an industry leading customer experience.

CapPro Companies are not rolled up and re-branded, they are integrated into the CapPro family. CapPro is dedicated to retaining key management, succession planning, and deploying a work force dedicated to customer satisfaction. We believe both of our Florida based platform companies were founded and operated by entrepreneurs with the same values.
